

Attorney Docket No.: DEX-0054
Inventors: Robbins et al.
Serial No.: 09/426,548
Filing Date: October 22, 1999
Page 2

(a) obtaining a DNA or RNA sample from a patient; and
(b) screening the DNA or RNA sample with the
oligonucleotide probe of claim 9 to detect a hMLH1 mutant 1,
a hMSH2 mutant 1, a hMSH2 mutant 2, or a hMSH2 mutant 3,
wherein binding of the oligonucleotide probe to the DNA or
RNA sample is indicative of the presence of the hMLH1 mutant
1, the hMSH2 mutant 1, the hMSH2 mutant 2, or the hMSH2
mutant 3 and hereditary non-polyposis colorectal cancer.

3. (amended) A method for predicting susceptibility of
a patient to developing hereditary non-polyposis colorectal
cancer comprising:

(a) obtaining a DNA or RNA sample from a patient; and
(b) screening the DNA or RNA sample with the
oligonucleotide probe of claim 9 to detect a hMLH1 mutant 1,
a hMSH2 mutant 1, a hMSH2 mutant 2, or a hMSH2 mutant 3,
wherein binding of the oligonucleotide probe to the DNA or
RNA sample is indicative of the presence of the hMLH1 mutant
1, the hMSH2 mutant 1, the hMSH2 mutant 2, or the hMSH2
mutant 3 and hereditary non-polyposis colorectal cancer.

9. (amended) An oligonucleotide probe complementary to
a hMLH1 mutant 1, hMSH2 mutant 1, hMSH2 mutant 2, or hMSH2
mutant 3.
